

# New Differences

March 2023

# Exciting Changes Coming

We are pleased to show you the changes we have made to the latest version of our iOS and Android apps, including its new name - **Reach More Parents by Weduc**.

We gained valuable feedback from our parent and customer focus group sessions, as well as conducting pilot testing. A big thank you to all those involved.

This feedback is what has underpinned the major changes you are about to see.

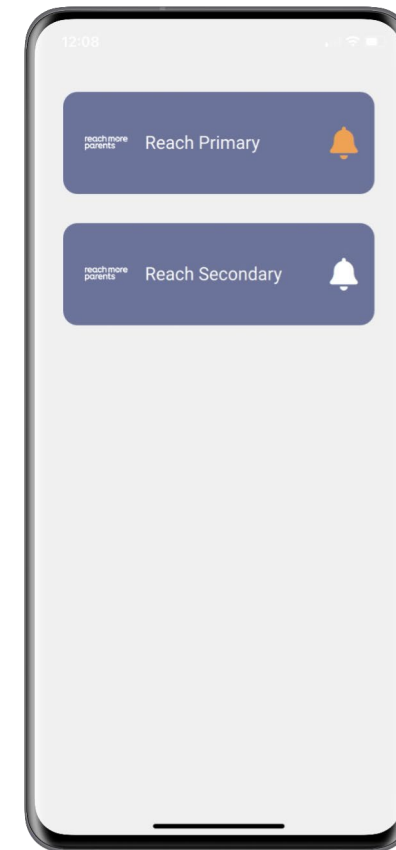

# Key Differences – Navigation \*

## School Selector

Parents can now easily select between the different schools their children may be attending.

Upon opening the app, they simply select which school they want to view information from.

Parents with children at only one school will bypass this and automatically see their own school.

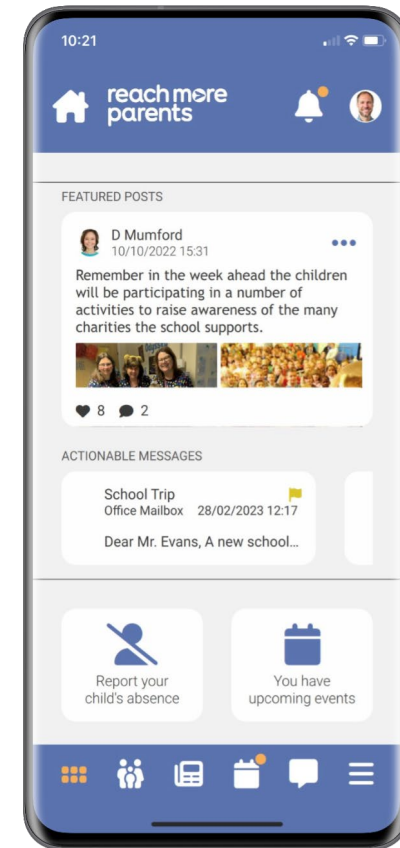

# Key Differences - Navigation

## Dashboard

For busy parents who want to see important information they need to act on, our new dashboard now highlights these. It will display, for example, featured posts (pinned posts), upcoming events and content requiring a parental response, such as consent forms.

This area will be constantly developed to include more items moving forward.

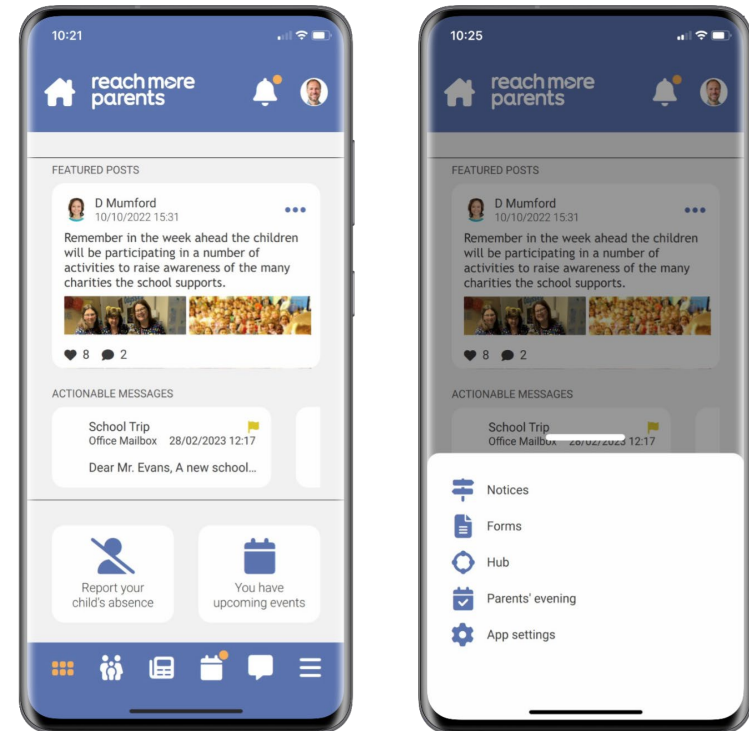

# Key Differences - Navigation

## Bottom Navigation Bar

To aid user navigation we have redesigned the bottom navigation bar so it contains the most commonly features used by parents.

An additional hamburger navigation menu has also been added where less common features can now be found.

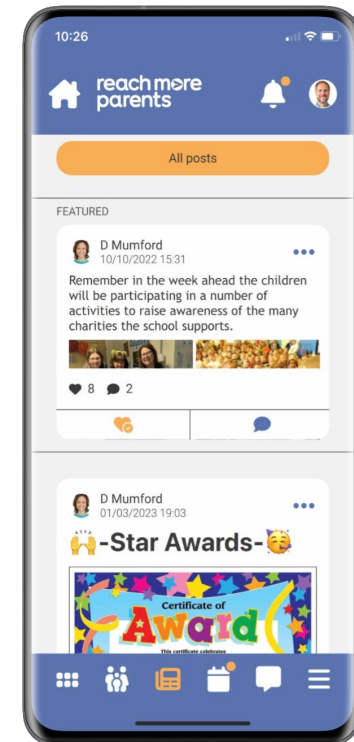

# Key Differences - Features

## Newsfeed

Our refreshed newsfeed layout helps users see the latest posts without missing existing pinned posts.

Pinned posts now utilise less screen space and are grouped together as featured posts within a new horizontally formatted section.

This means users no longer need to scroll past historical posts to see new content and can now view important content without it being missed.

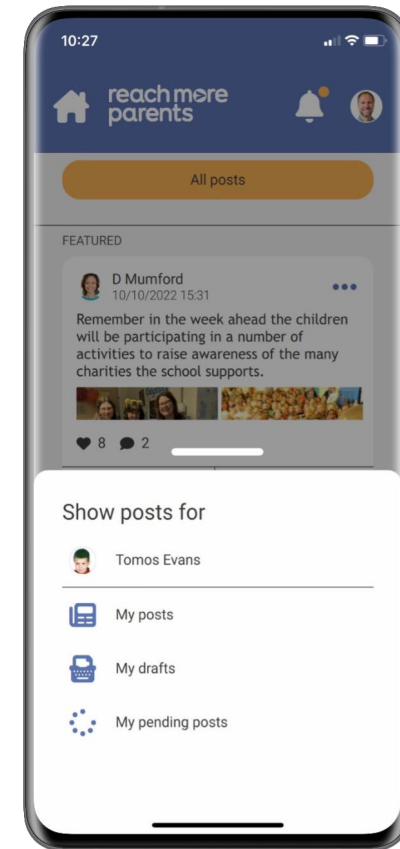

# Key Differences - Features

## Newsfeed

Parents who have more than one child at a school can now filter their newsfeeds by child.

This new feature also allows Teachers to filter by draft or pending posts.

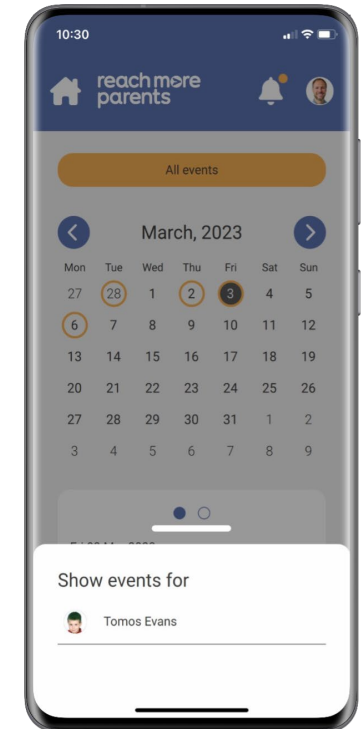

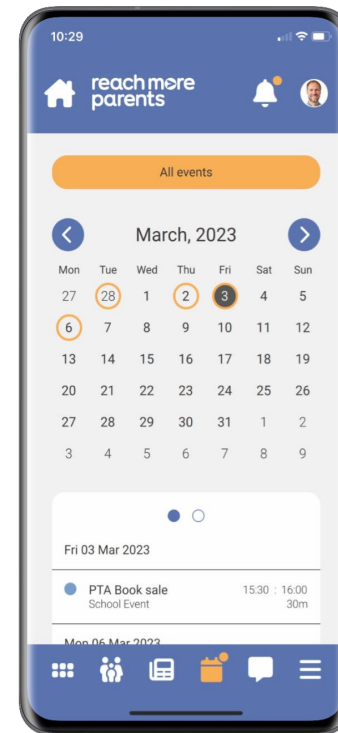

# Key Differences - Features

## Calendar

Like with the news feed filter, parents with children at more than one school can now filter calendar events by individual child.

In addition to this we have also removed blank days from the events summary list, ensuring users only see the key events days.

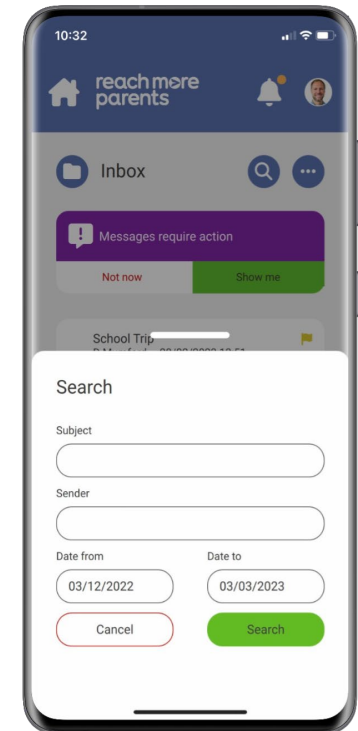

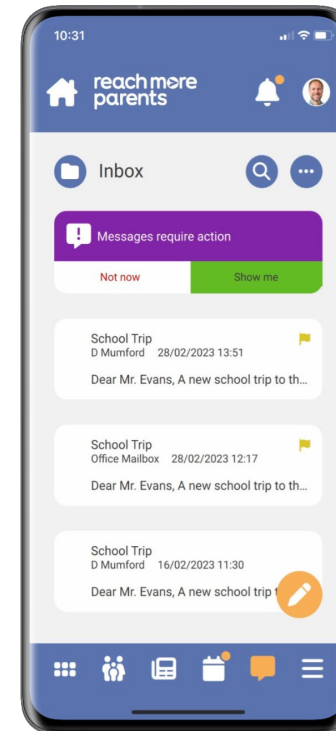

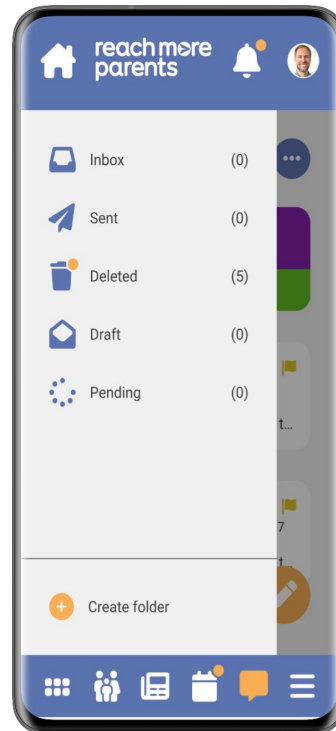

# Key Differences - Features

## Messages

Users now have a search facility, enabling them to find key messages instead of needing to scroll through past messages.

They also can create additional folders to store messages in.

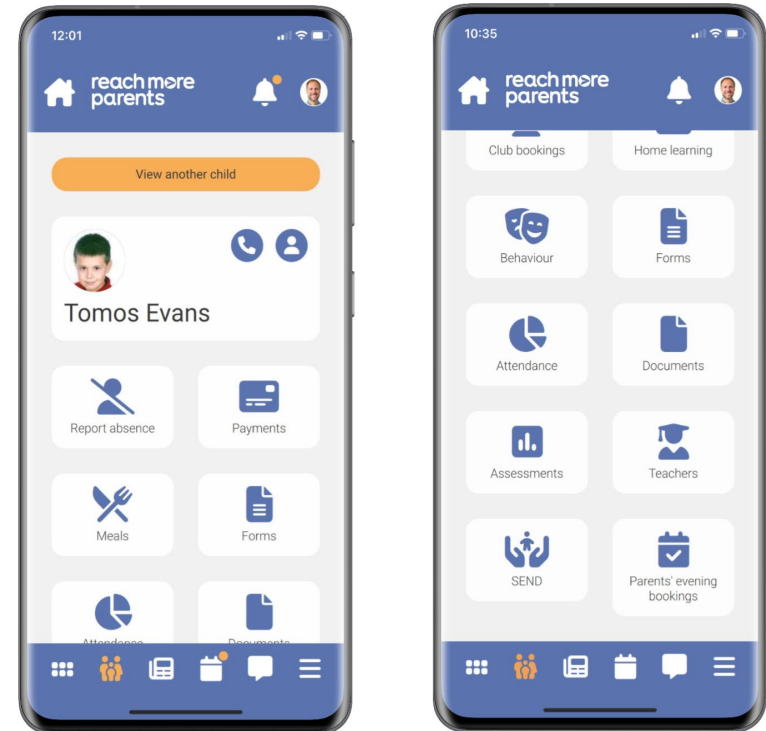

# Key Differences - Features

## Parent Portal

Updates to the Parent Portal enables parents to find child-specific items all in one place such as:

- Home learning tasks
- Payments
- Forms\*

\*We still also have a separate dedicated area for this too, because you may have forms not linked to a specific child

# Key Differences - Features

## Meal Manager

A new dashboard has been added to Meal Manager that displays key information such as outstanding payments and low balances. We have also introduced a booking wizard so parents can easily order meals in weekly batches.
